**Missouri Department of Natural Resources
Regulatory Impact Report
For
Proposed Amendment to 10 CSR 80-8.060**

- 1. Does the rulemaking adopt rules from the US Environmental Protection Agency or rules from other applicable federal agencies without variance?**

No. This rulemaking stems solely from the authorizations in state law.

- 2. A report on the peer-reviewed scientific data used to commence the rulemaking process.**

The proposed rule amendment development does not require review of peer-reviewed scientific data because the purpose of the rulemaking is to include financial assurance instrument (FAI) requirements pursuant to SB225. The proposed rule amendment relaxes the substantive requirements.

- 3. A description of the persons who will most likely be affected by the proposed rule, including persons that will bear the costs of the proposed rule and persons that will benefit from the proposed rule.**

Scrap tire end user facilities will be affected by this rulemaking. This rulemaking addresses industry concerns by relaxing the substantive requirements and maintaining the current costs of providing FAI's.

- 4. A description of the environmental and economic costs and benefits of the proposed rule.**

The Solid Waste Management Program anticipates no environmental or economic costs associated with the proposed rulemaking. This proposed rulemaking addresses industry concerns about provisions in the current rule and is expected to lower costs to some of the regulated community. Additionally, there may be an environmental benefit through financial assurance providing funds necessary for proper facility closures when operations cease.

- 5. The probable costs to the agency and to any other agency of the implementation and enforcement of the proposed rule and any anticipated effect on state revenue.**

The program does not expect this agency or any other public agency will incur additional costs to implement and enforce this proposed rulemaking. The proposed rulemaking will have no effect on State revenue.

- 6. A comparison of the probable costs and benefits of the proposed rule to the probable costs and benefits of inaction, which includes both economic and environmental costs**

and benefits.

This proposed rulemaking incorporates financial assurance requirements of SB225 and addresses industry concerns about provisions in the current rule and is expected to maintain or lower costs to the regulated community.

7. A determination of whether there are less costly or less intrusive methods for achieving the proposed rule.

Not applicable. This proposed rulemaking incorporates financial assurance requirements of SB225 and addresses industry concerns about provisions in the current rule and is expected to maintain or lower costs to the regulated community.

8. A description of any alternative method for achieving the purpose of the proposed rule that were seriously considered by the department and the reasons why they were rejected in favor of the proposed rule.

Not applicable. This proposed rulemaking incorporates requirements of SB225 and addresses industry concerns about provisions in the current rule and is expected to maintain or lower costs to the regulated community.

9. An analysis of both short-term and long-term consequences of the proposed rule.

The program determined that if the proposed rule amendment is not promulgated, the regulated community would continue to have concerns about provisions in the current rule related to the provision of FAI's. This amendment will maintain or lower the costs to the regulated community. Additionally, there may be an environmental benefit through financial assurance providing funds necessary for proper facility closures when operations cease.

10. An explanation of the risks to human health, public welfare or the environment addressed by the proposed rule.

Not applicable. The major human health, public welfare and environmental risk is associated with a fire at these facilities. This amendment proposes no additional fire-related requirements while maintaining current risk levels. Additionally, there may be an environmental benefit through financial assurance providing funds necessary for proper facility closures when operations cease.

11. The identification of the sources of scientific information used in evaluating the risk and a summary of such information

Not applicable. Peer-reviewed scientific data is not available for the changes made in this rulemaking.

12. A description and impact statement of any uncertainties and assumptions made in conducting the analysis on the resulting risk estimate.

Not applicable. No environmental standards are proposed or modified with this rulemaking.

13. A description of any significant countervailing risks that may be caused by the proposed rule.

None known. No environmental standards are proposed or modified with this rulemaking.

14. The identification of at least one, if any, alternative regulatory approaches that will produce comparable human health, public welfare or environmental outcomes.

This amendment is the alternative to the current rule.

15. Provide information on how to provide comments on the Regulatory Impact Report during the 60-day period before the proposed rule is filed with the Secretary of State.

Formal comments can be provided on either the Regulatory Impact Report or the draft rule text by sending them to the contact listed below.

Questions and/or comments may be sent to:

Chris Nagel
Compliance and Enforcement Section Chief
Missouri Department of Natural Resources
Solid Waste Management Program
P.O. Box 176
